**TEAMS :**

**ENG-346 Teams code is 0uv7jlm**

# Agenda

- Quick Notes
- Introduction
- Syllabus review
- Test for current knowledge
- Methodology
- Course materials review: Coursebook and other resources
- Assignments, exams, and project
- Office hours and communication channels
- Encouraging questions and motivation

## Quick Notes : PROGRAM – ALGORITHM – MATH RELATION

- A Computer Program is based on an Algorithm.
- Algorithm (Webster Dict.) :

An algorithm is a finite sequence of **mathematically** rigorous instructions, typically used to solve a class of specific problems or to perform a computation.

# Quick Notes : MATH. > ALGO. > PROG. LANGUAGE

- Example : Fibonacci Numbers :  $a_n = a_{n-1} + a_{n-2}$
- $a_{100000} = ?$
- **Math** : Binet's Formula (Generating Functions)  $O(\log(n))$  (Abraham De Moivre 1730)

$$F(n) = \frac{\phi^n - (1-\phi)^n}{\sqrt{5}}$$

$$\phi = \frac{1 + \sqrt{5}}{2}$$

- **Algorithm** : Find an algorithm that calculates faster with less resource :

```
def nth_fibonacci(n):  
    if n <= 1: return n  
    return nth_fibonacci(n - 1) + nth_fibonacci(n - 2)  
  
print(nth_fibonacci(5))
```

$O(2^n)$

```
F_n=0 ; F_n_1=2; F_n_2=1  
n=5  
for in range(n):  
    F_n = F_n_1 + F_n_2  
    F_n_2=F_n_1  
    F_n_1=F_n  
print(F_n)
```

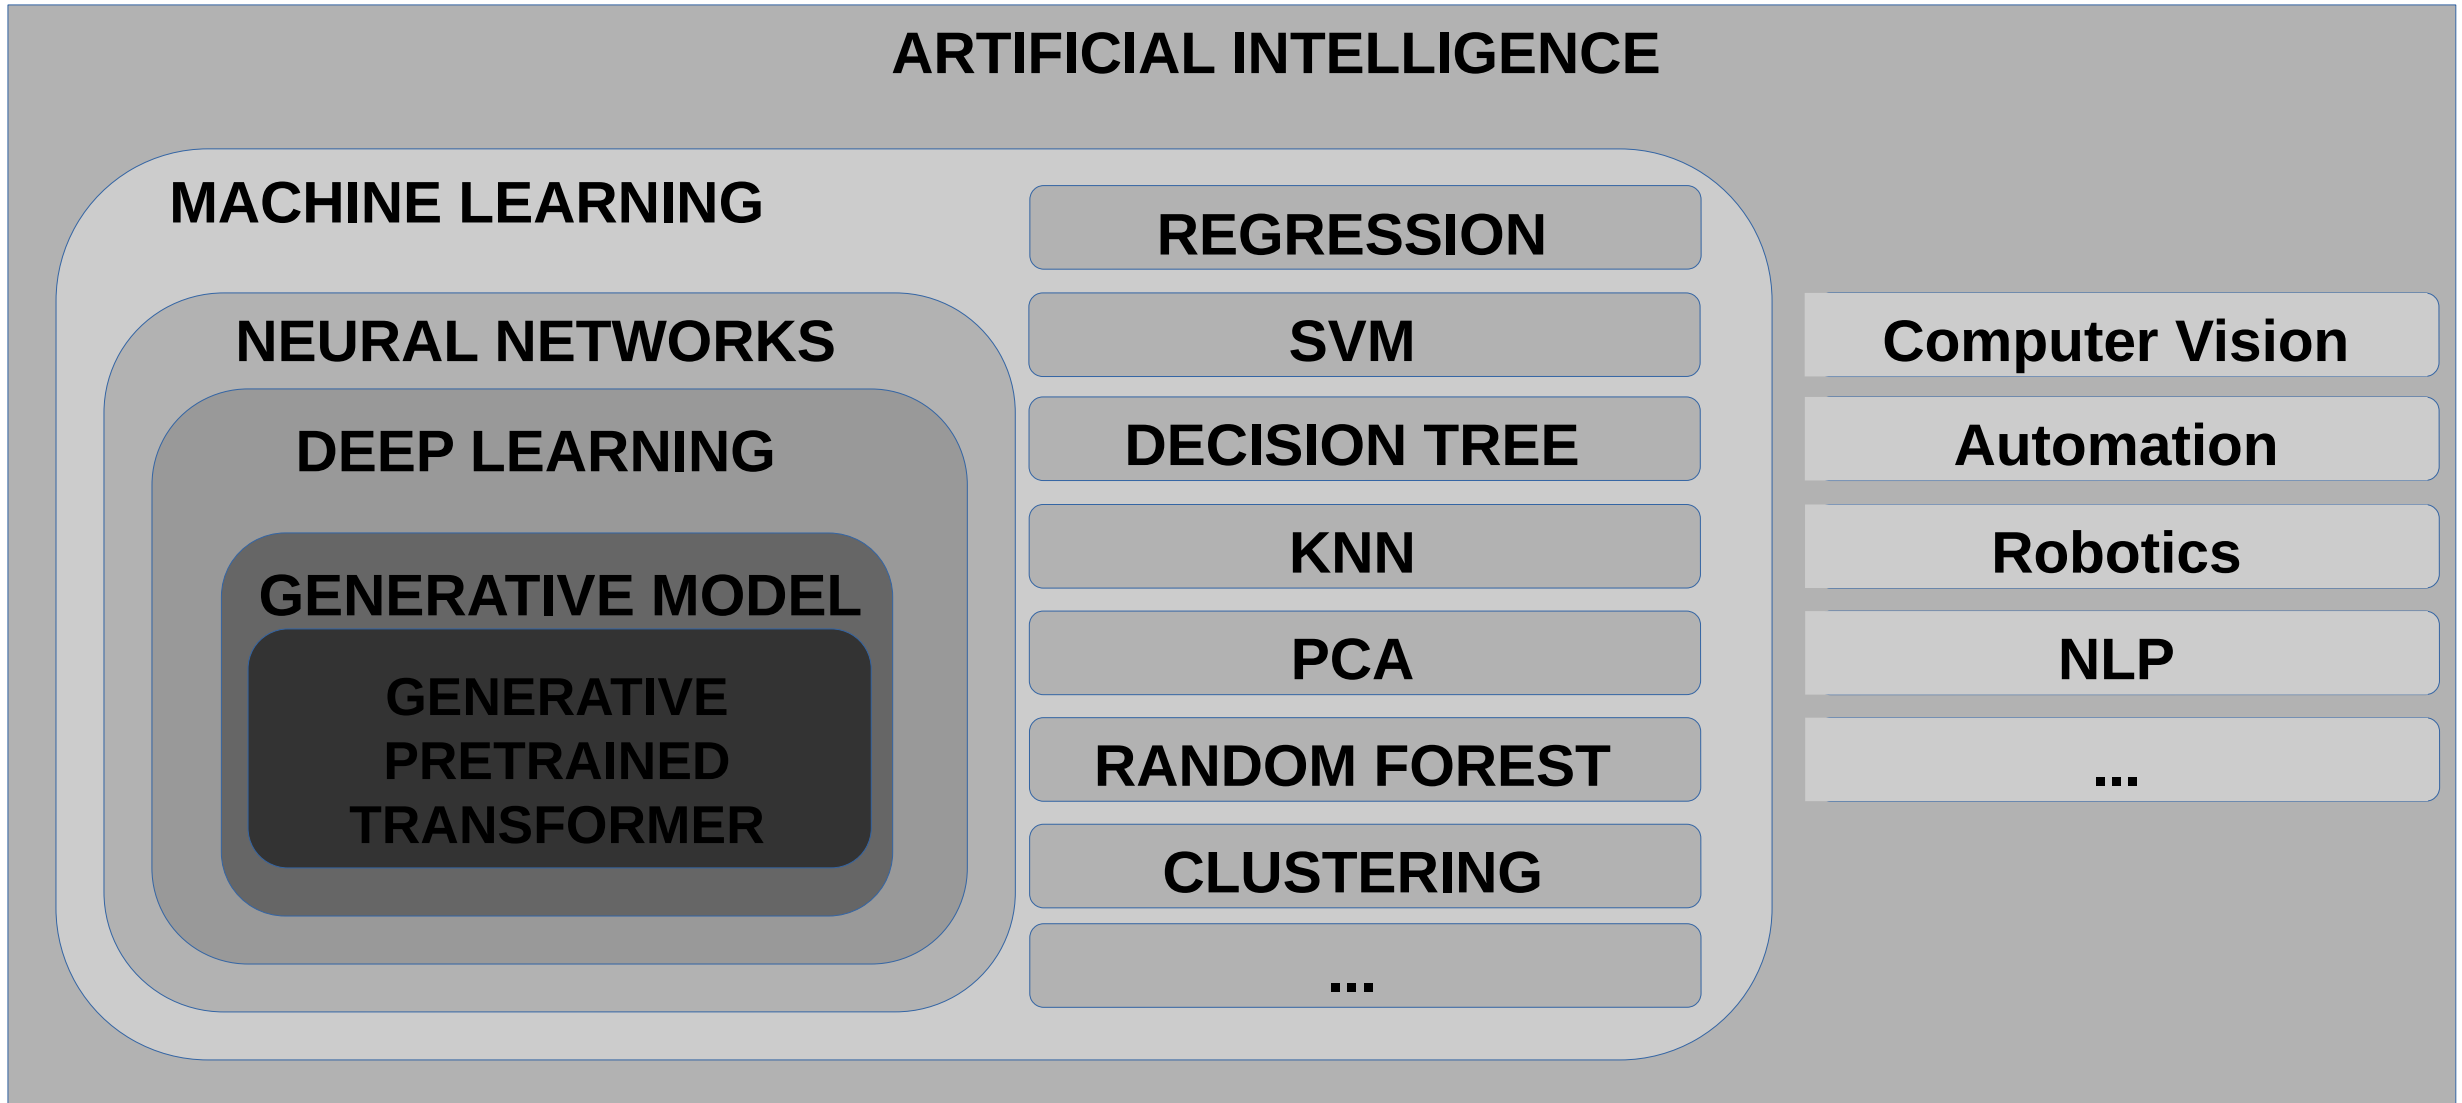

$O(n)$

- **Programming Language** : C/Rust programs run definitely faster than java/python programs (**for the same algorithm**)

# Quick Notes : ARTIFICIAL INTELLIGENCE

- Artificial intelligence (AI) is the capability of computational systems to perform tasks typically associated with human intelligence, such as learning, reasoning, problem-solving, perception, and decision-making. (Wikipedia)

# Quick Notes : ARTIFICIAL INTELLIGENCE

# Quick Notes : MACHINE LEARNING

**PROBLEM DEFINITION**

**DATA COLLECTION**

**DATA CLEANING**

**FEATURE EXTRACTION**

**TRAINING**

**VALIDATION**

**TESTING**

**DATA VISUALIZATION**

**REPORT GENERATION**

# Quick Notes : IMPLEMENTATION OF AI TASKS

**PYTHON**

**R**

**MATLAB**

**JAVA**

**C++**

**RUST**

**...**

**Homework and Project will be implemented in Python.**

**Python has large set of Machine Learning libraries that wraps native (C) libraries.**

**Python is easy to learn.**

- MEHMET PEKMEZCİ :
- ACADEMY :
- 2003 - BSc, Galatasaray University, Computer Engineering
- 2011 - MSc, Maltepe University, Computer Engineering
- 2025 - PhD, Gebze Technical University, Computer Engineering
- WORK :
- 2003 – 32BIT LTD. – Java Developer
- 2008 – HAVELSAN - Unix/Linux System Admin
- 2011 - HAVELSAN - Development Environment Admin
- 2017 – HAVELSAN - System Admin Team Leader
- 2019 – HAVELSAN - Infrastructure Group Leader (Sysops, Devops, Infra Teams)

# Introduce yourself

- Your name
- Your department
- Your expectations from the course
- Your skill of AI knowledge

# Course Overview

# Why Data Structures and Algorithms

- Data structures are vital in handling and manipulating large datasets in fields like machine learning and data science.
- Algorithms are used for data analysis, pattern recognition, and more.
- Code efficiency, e.g., optimizations in searching and sorting, which is critical for software performance.
- Structural approach to problem solving.
- Critical Thinking and Problem-Solving Skills: Encourages to break down complex problems into manageable components.
- Resource management, i.e., efficient use of system resources like memory and processing power.

# Purpose and Outcomes

Purpose of the course    This is a course designed to *enhance advanced Python programming, data structures, and algorithm skills* necessary for developing software, coding, and conducting group work in the field of data science and artificial intelligence

Learning outcomes

- Ability to perform basic data structures and algorithm design and analysis
- Ability to collaborate in software development
- Possessing skills in current software development technologies

# Methodology

- Face-to-face lectures,
- Active participation expected,
- Hands-on coding,
- Homeworks: Individual work expected. **A pdf report and a python file is expected to be delivered.**
- Project: May be group project based on the project idea. **A pdf report, a presentation and a python code tar ball is expected at the end of the semester.** Phases are indicated in “Project Phases” , report dates are indicated in “Schedule” pages.
- Two quizzes,
- One midterm exam,
- One final exam.

# Project Phases

- Data Collection
- Data Extraction (Standardized Format)
- Data Cleaning
- Find and replace missing value
- Normalize data
- Data Visualization
- Feature Extraction
- Training
- Validation
- Testing

# Project Report Templates

- <https://github.com/mehmetpekmezci/GTU-ENG-346/tree/main/Reports>

# Project - Possible Receivers/Transmitters

- Receivers
  - Webcam (image receiver)
  - Microphone (sound receiver)
  - Sensors in mobile phone (Accelerometers/Gyros/GPS, ... etc.)
  - Bluetooth temperature/humidity sensors
- Transmitters
  - Loud-Speaker (sound transmitter)

Example Scenario : Transmit various sound frequencies and take photo of the leaves of a tree. Try to find a relation between the growth speed of the leaves and the sound frequencies they are applied.

# Grading

<b>Homework</b>	<b>20</b>
<b>Quiz</b>	<b>20</b>
<b>Midterm Exam</b>	<b>20</b>
<b>Project</b>	<b>20</b>
<b>Final Exam</b>	<b>30</b>
<b>Total</b>	<b>110</b>

# Schedule

Week #	Topic	Assessment
Week 1	Basic Python Concepts with GUI	
Week 2	Matrix Operations and Numpy	HW1
Week 3	Basic Bash Concepts	<b>Project proposals</b>
Week 4	Data Analysis and Visualization	HW2
Week 5	Object-Oriented Programming	QUIZ1
Week 6	Complexity	<b>Project Reviews</b>
Week 7	Arrays, Linked Lists, Maps,	Midterm exam
Week 8	Recursion	
Week 9	Stacks and Queues	HW3
Week 10	Linked Lists, Trees	<b>Project Reviews</b>
Week 11	Graphs and NetworkX	<b>HW4</b>
Week 12	Graphs and NetworkX	QUIZ2
Week 13		
Week 14	Final Projects	
Week 15	-	
Week 16	Final exam	Final project presentations

# Windows Subsystem for Linux (WSL)

## <https://learn.microsoft.com/en-us/windows/wsl/install>

## <https://ubuntu.com/desktop/wsl>

## In powershell :

```
Wsl --list --online
```

```
Wsl --install Ubuntu-24.04
```

```
Wsl -d Ubuntu-24.04
```

## Linux Shell Starts Here

```
sudo apt update
```

```
sudo apt install python3-pip
```

```
pip3 install matplotlib numpy pandas
```

## The first time you run code from Ubuntu, it will trigger a download of the necessary dependencies:

```
code .

ENG 346 – Data Structures and Algorithms for Artificial Intelligence

**Efficiency:** Data structures and algorithms are fundamental to writing efficient code.

They help optimize operations like searching, sorting, and accessing data, which is critical for software performance.

**Problem Solving:** They provide a structured approach to problem-solving. By understanding different data structures and algorithms, programmers can choose the right tools to solve specific problems effectively.

**Resource Management:** Efficient data structures and algorithms are essential for managing system resources like memory and processing power. Poorly designed code can lead to resource wastage and
