

ENG 346 Data Structures and Algorithms for Artificial Intelligence Data Visualizations

Dr. Mehmet PEKMEZCİ

mpekmezci@gtu.edu.tr

https://github.com/mehmetpekmezci/GTU-ENG-346

ENG-346-FALL-2025 Teams code is **Ouv7jlm**

Visualization Libraries

- Matplotlib
 - https://matplotlib.org/stable/gallery/index.html
- Seaborn
 - https://seaborn.pydata.org/examples/index.html
- Plotly
- Ggplot
- •

Types of Features

- Numerical: Values with numeric types (int, float, etc.).
 - Examples: age, salary, height.
- Categorical Features: Features that can take one of a limited number of values.
 - Examples: gender (male, female), color (red, blue, green).
- Ordinal Features: Categorical features that have a clear ordering.
 - Examples: T-shirt size (S, M, L, XL).
- Binary Features: A special case of categorical features with only two categories.
 - Examples: is_smoker (yes, no), has_subscription (true, false).
- Text Features: Features that contain textual data.

Types of Plots

- Line Charts: Display trends.
- Scatter Plots: Investigate relationships between two variables.
- Bar Charts: Summarize categorical data and compare different categories.
- Pie Charts: Illustrate proportions of a whole for categorical variables.
- Subplots and Axes: Multiple plots in one figure.
- Histograms: Explore the distribution of individual variables.
- **Heatmaps**: Visualize correlation matrices to understand relationships between variables.

imports

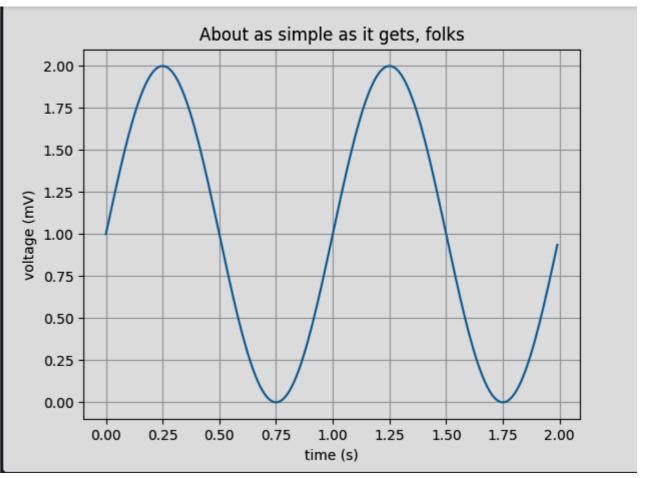

GEBZE TECHNICAL UNIVERSITY

import numpy as np import pandas as pd import matplotlib.pyplot as plt import seaborn as sns %matplotlib inline # for Notebooks

```
import matplotlib.pyplot as plt
import numpy as np
# Data for plotting
t = np.arange(0.0, 2.0, 0.01)
s = 1 + np.sin(2 * np.pi * t)
fig, ax = plt.subplots()
ax.plot(t, s)
ax.set(xlabel='time (s)', ylabel='voltage (mV)',
    title='About as simple as it gets, folks')
ax.grid()
fig.savefig("test.png")
plt.show()
```

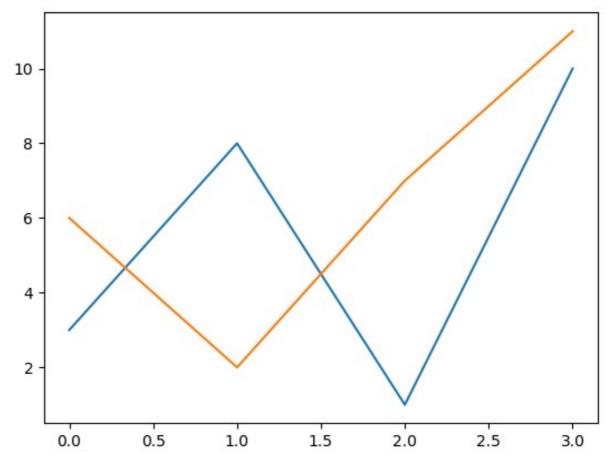

Line Plots

```
import matplotlib.pyplot as plt import numpy as np
```

```
x1 = np.array([0, 1, 2, 3])
y1 = np.array([3, 8, 1, 10])
x2 = np.array([0, 1, 2, 3])
y2 = np.array([6, 2, 7, 11])
plt.plot(x1, y1, x2, y2)
plt.show()
```

Line Plots

import matplotlib.pyplot as plt import pandas as pd

Load the dataset into a Pandas DataFrame df = pd.read csv("HistoricalPrices.csv")

Rename the column to remove an additional space df = df.rename(columns = {' Open': 'Open', ' High': 'High', ' Low': 'Low', ' Close': 'Close'})

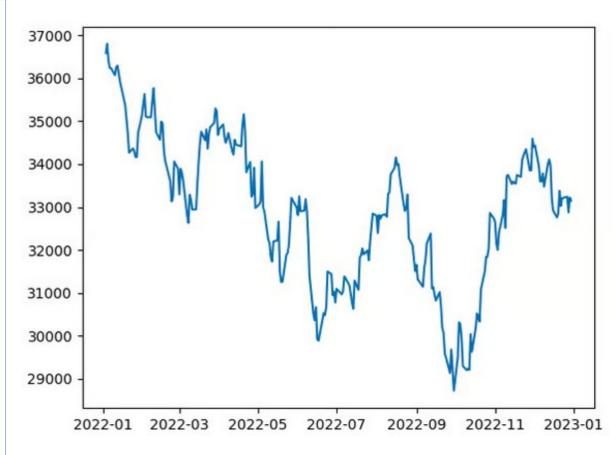

Convert the date column to datetime df['Date'] = pd.to_datetime(df['Date'])

Sort the dataset in the ascending order of date df = df.sort values(by = 'Date')

Extract the date and close price columns dates = df['Date'] closing_price = df['Close']

Create a line plot plt.plot(dates, closing_price)

Scatter Plots

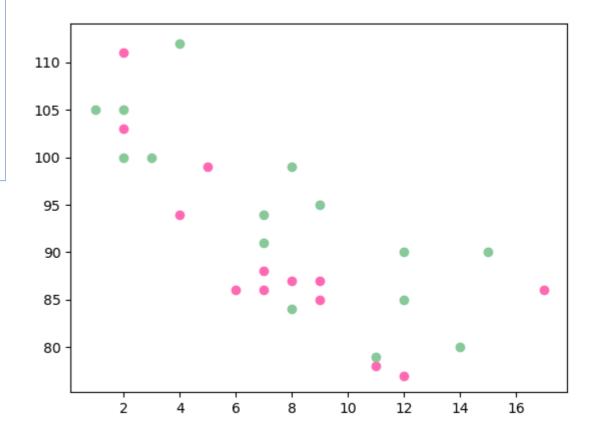

```
import matplotlib.pyplot as plt
import numpy as np

x = np.array([5,7,8,7,2,17,2,9,4,11,12,9,6])
y = np.array([99,86,87,88,111,86,103,87,94,78,77,85,86])
plt.scatter(x, y, color = 'hotpink')

x = np.array([2,2,8,1,15,8,12,9,7,3,11,4,7,14,12])
y = np.array([100,105,84,105,90,99,90,95,94,100,79,112,91,80,85])
plt.scatter(x, y, color = '#88c999')

plt.show()
```

Scatter Plots

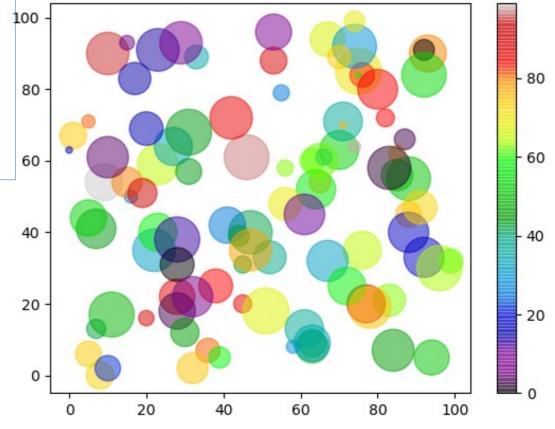

```
import matplotlib.pyplot as plt
import numpy as np

x = np.random.randint(100, size=(100))
y = np.random.randint(100, size=(100))
colors = np.random.randint(100, size=(100))
sizes = 10 * np.random.randint(100, size=(100))

plt.scatter(x, y, c=colors, s=sizes, alpha=0.5, cmap='nipy_spectral')

plt.colorbar()

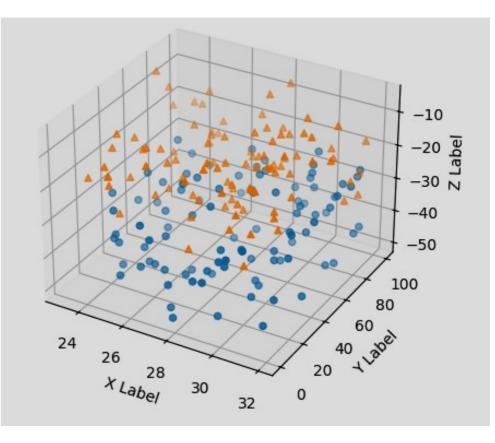

plt.show()
```

Scatter Plots - 3D

```
GEBZE TECHNICAL UNIVERSITY
```

```
import matplotlib.pyplot as plt
import numpy as np
np.random.seed(19680801) # Fixing random state for reproducibility
def randrange(n, vmin, vmax):
   Helper function to make an array of random numbers having shape (n, )
   with each number distributed Uniform(vmin, vmax).
   return (vmax - vmin)*np.random.rand(n) + vmin
fig = plt.figure()
ax = fig.add_subplot(projection='3d')
n = 100
# For each set of style and range settings, plot n random points in the box
# defined by x in [23, 32], y in [0, 100], z in [zlow, zhigh].
for m, zlow, zhigh in [('o', -50, -25), ('^', -30, -5)]:
  xs = randrange(n, 23, 32)
  ys = randrange(n, 0, 100)
  zs = randrange(n, zlow, zhigh)
   ax.scatter(xs, ys, zs, marker=m)
ax.set xlabel('X Label')
ax.set ylabel('Y Label')
ax.set zlabel('Z Label')
```

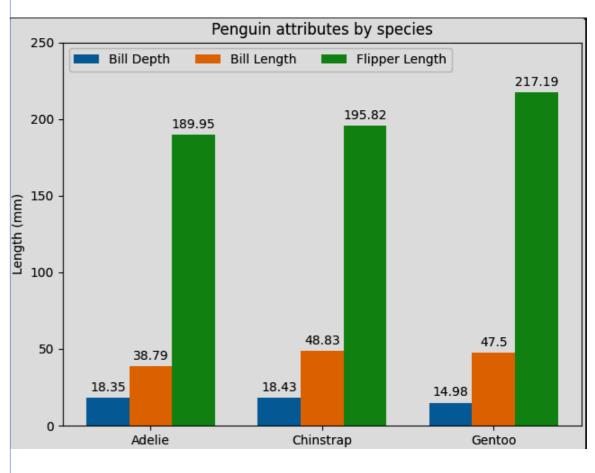

plt.show() ENG 346 - Data Structures and Algorithms for Artificial Intelligence

Bar Charts

```
import matplotlib.pyplot as plt
import numpy as np
species = ("Adelie", "Chinstrap", "Gentoo")
penguin_means = {
    'Bill Depth': (18.35, 18.43, 14.98),
    'Bill Length': (38.79, 48.83, 47.50),
    'Flipper Length': (189.95, 195.82, 217.19),
x = np.arange(len(species)) # the label locations
width = 0.25 # the width of the bars
multiplier = 0
fig, ax = plt.subplots(layout='constrained')
for <u>attribute</u>, <u>measurement</u> in <u>penguin_means</u>.items():
    offset = width * multiplier
    rects = ax.bar(x + offset, measurement, width, label=
attribute)
    ax.bar_label(rects, padding=3)
    multiplier += 1
# Add some text for labels, title and custom x-axis tick
labels, etc.
ax.set_ylabel('Length (mm)')
ax.set title('Penguin attributes by species')
ax.set_xticks(x + width, species)
ax.legend(loc='upper left', ncols=3)
ax.set vlim(0, 250)
plt.show()
```

Pie Charts

import matplotlib.pyplot as plt

labels = 'Frogs', 'Hogs', 'Dogs', 'Logs' sizes = [15, 30, 45, 10]

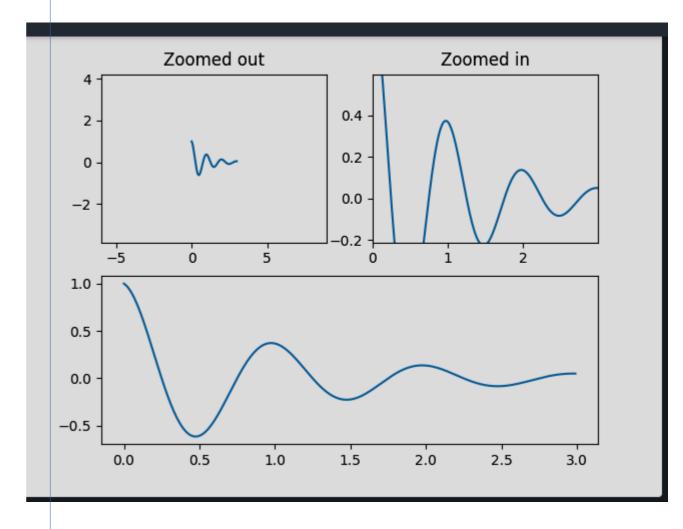

fig, ax = plt.subplots()
ax.pie(sizes, labels=labels)

Subplots and Axes

```
import matplotlib.pyplot as plt
import numpy as np
from matplotlib.patches import Polygon
def f(t):
  return np.exp(-t) * np.cos(2*np.pi*t)
t1 = np.arange(0.0, 3.0, 0.01)
ax1 = plt.subplot(212)
ax1.margins(0.05)
                         # Default margin is 0.05, value 0 means fit
ax1.plot(t1, f(t1))
ax2 = plt.subplot(221)
ax2.margins(2, 2)
                        # Values >0.0 zoom out
ax2.plot(t1, f(t1))
ax2.set title('Zoomed out')
ax3 = plt.subplot(222)
ax3.margins(x=0, y=-0.25) # Values in (-0.5, 0.0) zooms in to center
ax3.plot(t1, f(t1))
ax3.set title('Zoomed in')
```

Histogram

import matplotlib.pyplot as plt import numpy as np

from matplotlib import colors from matplotlib.ticker import PercentFormatter

```
# Create a random number generator with a fixed seed for reproducibility rng = np.random.default_rng(19680801)

N_points = 100000

n_bins = 20
```

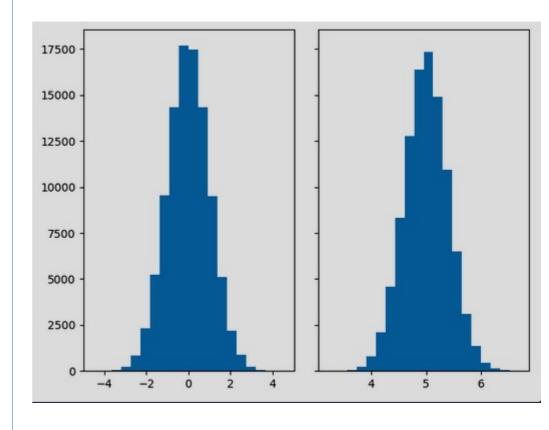

```
# Generate two normal distributions
dist1 = rng.standard_normal(N_points)
dist2 = 0.4 * rng.standard_normal(N_points) + 5
```

```
fig, axs = plt.subplots(1, 2, sharey=True, tight_layout=True)
```

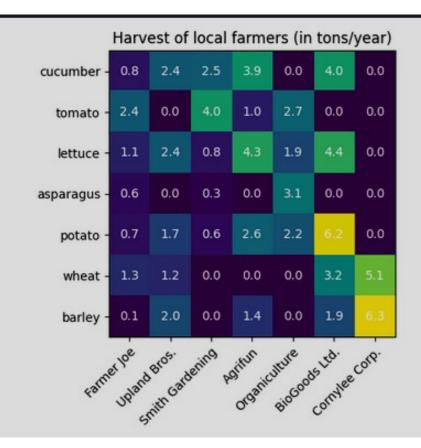

```
# We can set the number of bins with the *bins* keyword argument. axs[0].hist(dist1, bins=n_bins) axs[1].hist(dist2, bins=n_bins)
```

Heatmaps

```
import matplotlib.pyplot as plt import numpy as np
```

import matplotlib import matplotlib as mpl

```
vegetables = ["cucumber", "tomato", "lettuce", "asparagus",
         "potato", "wheat", "barley"]
