GEBZE TECHNICAL UNIVERSITY

QUIZ – 1

1. What is a pickle file, why do we use it?

2. Write a python function that takes two string parameters, concatenates thıse two strings , plus a constant string “ABC”, and returns the result.
   1. NOTE : “Easy to maintain” , “easy to read” code rules should be obeyed.

3. Demonstrate that $(A.B)^{-1}=B^{-1} . A^{-1}$ (No python code, only you will write maximum 5-6 lines of mathematical operations)

4. Multiply the following matrices A and B,.(You have to transpose one of them).

$$A=\begin{bmatrix}1 & 0\\ 1 & 1\end{bmatrix} \qquad B=\begin{bmatrix}2 & 1\\ 0 & 1\\ 1 & 0\end{bmatrix}$$

5. Numpy matrix functions (writing only name is enough):
   1. What if the name of the numpy function that creates a matrix full of zero values:
   2. What is the name of the numpy function that merges two matrices horizontally :
   3. What is the name of the numpy function that finds the average of the values in a list of float or integer values :
   4. What is the name of the numpy function that multiply two matrices :
